SKILLS

- Languages: C++, Python
- ML Systems: Model training, inference, serving, evaluation
- LLM Tool calls: LangChain, FAISS, RAG, Prompt engineering
- Infra: Docker, Jenkins, Terraform, CI/CD
- Data: Pandas, NumPy, Scikit-learn

PROJECTS

- Multi-Agent Facebook Ads Analysis System

Dec 2025

 - Domain: Multi-Agent Systems | LangChain | LLMs | Python
 - Built a multi-agent pipeline (Data, Insight, Evaluator, Creative) for automated Facebook Ads performance analysis.
 - Implemented schema validation, data drift detection, and dataset summarization to ensure reliable and consistent data processing.
 - Generated ROAS/CTR insight hypotheses using LLMs and validated them with Evaluation Agent using numeric before–after performance.
 - Centralized orchestration with structured JSON/Markdown reporting cutting down manual report generation.
- Health Score Prediction System

Nov 2025

 - Domain: Machine Learning | TensorFlow | Streamlit | Scikit-learn | DevOps
 - Developed a Deep Neural Network using TensorFlow to analyse wearable sensor data, achieving a high-performance R² Score of 0.979 and an MAE of 0.803.
 - Built an interactive Streamlit dashboard for real-time predictions and health insight visualization.
 - Automated infrastructure provisioning, deployment pipelines, and monitoring with Terraform, Jenkins, Docker, and Nagios.
- AI-Powered PDF Quiz Generator

Aug 2025

 - Domain: Natural language processing & EdTech | Python | FAISS | Lang Chain | Ollama LLMs
 - Built a Streamlit-based chatbot to generate MCQs and open-ended quizzes from PDF documents.
 - Integrated RAG with FAISS-based hybrid semantic retrieval to support LLM-driven question generation and evaluation.
 - Added real-time scoring, streak bonuses, and adaptive difficulty, transforming the quiz system into an engaging game-like experience.
- Restaurant Recommendation Model

Apr 2025

 - Domain: Machine learning| Unsupervised learning | MIOps
 - Created a Flask web app to collect user input and serve personalized restaurant recommendations.
 - Utilized the K-Means clustering algorithm to group restaurants based on based on cost, rating, cuisine, and location features for recommendations.
 - Built CI/CD automation pipelines with Docker and Jenkins for continuous testing and deployment.
- Iterative Human Feedback in Generative Models

Nov 2024

 - Domain: Natural Language Processing
 - Designed an Iterative Human Feedback (IHF) framework combining BLEU/ROUGE with structured human evaluation.
 - Applied the approach to product description generation with the help of Amazon product dataset (1466 records × 16 features).
 - Demonstrated qualitative performance improvements by iterative human-in-the-loop feedback to refine generative model outputs.
 - Implemented a feedback-driven refinement loop to progressively enhance output quality and alignment.

CERTIFICATES

- Fundamentals of AI Agents Using RAG and LangChain | IBM | Coursera|

Nov 2025
- Generative AI Engineering and Fine-Tuning Transformers| IBM | Coursera|

Nov 2025
- IBM Machine Learning Specialization | IBM | Coursera |

Oct 2024
- Cloud Computing with AWS | Gokboru Tech Pvt. Ltd |

Jul 2024
- Generative AI with Large Language Models | Amazon Web Services | Coursera |

May 2024
- Programming in C++: A Hands-on Introduction | United Latino Students Association | Coursera |

Apr 2024

ACHIEVEMENTS

- Book chapter on “Iterative Human Feedback in Generative Models “accepted in CGAIML2025 under "Navigating the Frontiers of AI and ML".
- Paper accepted at CSCT 2025, NIT Sikkim (Springer Scopus-indexed) – “A Simulation-Based Deep Learning Approach for Real-Time Athlete Health Monitoring Using Synthetic Multivariate Data”.
- 150+ questions on Leetcode.

EDUCATION

- Lovely Professional University

Punjab, India

• Bachelor of Technology - Computer Science and Engineering; CGPA: 6.86

Aug 2022-Current
- Dav Public School

Jharkhand, India

• Intermediate; Percentage: 68%

April 2021 - March 2022

• Matriculation; Percentage: 82%

April 2019 - March 2020
